We can save you over 30 percent with our digital security solution.

LATITUDE NETWORK MANAGEMENT SYSTEM

The Latitude Network Management System (NVMS) is a fully digital video surveillance system with unlimited storage capacity. This software-based video, audio and data management system offers monitoring, recording and analysis functionality that delivers timely, accurate information so users can quickly and effectively respond to challenges.

The NVMS is designed to be a digital system but can be either digital or analog. Users can view live and recorded images on a PC monitor or an analog CCTV monitor. Camera selection and camera control can be done from a PC keyboard and mouse or a traditional CCTV keyboard.
The NVMS is based on Microsoft Windows and can be installed on any computer running on a Windows 2000/XP Professional or a 2003 server.

Benefits to you

- IP-based decoder can convert digital video to standard analog signal so users can maintain traditional CCTV equipment if desired
- Video archive search tools enable searches based on time, date and/or degree of motion alarms
- No geographic constraints due to centralized viewing/monitoring of multiple sites
- Economical use of computer equipment with no need for new coaxial cables
- System supports one to 70 cameras with unlimited hardware storage
- Allows for live viewing of up to 32 cameras and video servers
- Highly reliable IP fixed and dome cameras and video servers
- Audio and security data is stored along with video
- Secure user access using multi-level access rights
- Continuous, scheduled or event-based recording capability
- Multiple video compression standards available

SceneTracker

Scene Tracker provides a real-time perspective of multiple camera images in a single, seamless view by "stitching" scenes from multiple cameras. SceneTracker allows the world to be seen as the human eye sees it without limitations of a single camera view. SceneTracker allows the user to track, zoom or hover over an object or person of interest. SceneTracker allows you to cut operational costs by decreasing necessary manpower, reducing operator errors, increasing reaction time and providing shorter training cycles for the users.

Transitioning to NVMS

We will help you transition from analog to a fully digital system by upgrading your existing system at your pace and within your budget. You will be able to:
- Keep your analog switch, enhance it or go digital
- Retain and leverage all your analog investment and keyboard interfaces
- Keep your current keyboards, use new GUI's or both
- Maintain analog monitors, switch to a wide choice of digital displays or both
- Keep analog recording until you're ready to phase out VCR systems in favor of digital recording
