

Innovative technology solutions for your threat management

Maestro has focused on putting together all the pieces of the best solutions so that we can provide your company with an outstanding line of services. We know how critical various aspects of your business are and we will help to keep an eye on them for you. Please review the four areas shown below and then let us put together a customized demo just for you.

Environmental Monitoring

Using the NetBotz monitoring and management appliances we are able to offer an environmental monitoring service for your enterprise. The NetBotz pod-based architecture gives tremendous flexibility and expandability. By keeping an eye on Temperature, Humidity, Dew Point, Air Speed, Water Detection, and much more we are able to notify you if anything starts to go wrong.

Network Intrusion Prevention

We've designed a unique service based on the need for high-speed intrusion prevention and detection systems. We've leveraged TippingPoint because it delivers the results we need, when we need it. This enables us to offer you a network-based security solution with ultra-high performance, scalability and reliability.

Offsite Data Storage

We've teamed up with CoreVault to provide top-of-the-line data backup and recovery services that are automated and centrally managed to help protect your data. This solution helps with offsite protection, regulatory compliance, fast restores and increased security with world-class customer service. With our service, your organization can focus on its core business knowing your data is always protected.

Perimeter Security

OnSSI and Maestro team up to bring you a powerful surveillance solution which lets you take complete control of digital and analog surveillance cameras throughout your campus. Its built-in features completely eliminate the need for traditional hardware such as video matrix switches, multiplexers and quads. Its use of Ethernet network cabling eliminates the need for COAX cabling. Existing analog cameras can even be controlled when used with Video Servers.
